About Chrome®SR

Chrome^{SR} improves plant performance and complements a balanced fertilizer program. Corn utilizes large quantities of nitrogen during the grand growth phase. From the 8th-leaf stage through tasseling, N uptake is 4 to 8 pounds per day per acre. Soybean nitrogen demand increases at R3 and peaks shortly after the beginning of pod formation. Chrome^{SR} gives plants entering the reproductive phase a strategic, quick and highly efficient nitrogen source when demand is most crucial. Chrome^{SR} is a slow-release nitrogen ensures nitrogen availability during the grain fill period. Slow-release nitrogen provides nutrition when unpredictable weather or the expense of side dressing limit the application of other nitrogen fertilizers. Incite™ Plant Growth Regulator is an excellent partner product with Chrome^{SR} to maximize yield potential.

Application Instructions

Use Rate: 1 to 2 gallons per acre

Apply 1 to 2 gallons per acre during the growing season as a supplement to a good Nitrogen program. Ideal application timing:

Corn: V5 to V8, pre-tassel and VT

Soybeans: V6 to R4

Wheat: Spring green up to early joint and flag leaf to anthesis. Use caution when applying at high temperatures. The presence of dew or moisture on the leaves will enhance uptake of this product into the plant.

In-Season Effectiveness: Adding a slow-release nitrogen application of Chrome^{SR} in-season can be an effective addition to a well-balanced, planned fertility program.

GUARANTEED ANALYSIS

Total Nitrogen (N)	24.0%
8.0% Slowly Available Water Soluble Nitrogen*	
0.6% Ammoniacal Nitrogen	
15.4% Urea Nitrogen	
Available Phosphate (P_2O_5)	1.0%
Boron (B)	0.20%
0.20% Water Soluble Boron (B)	

Derived from: monopotassium phosphate, urea and boric acid.
***8.0% Slowly available nitrogen from methylene urea.**

Chrome^{SR} Formulation

KaPre® PhoNix
Contains organic compounds that help reduce the effects of environmental stress as well as optimize yield.

KaPre® Spectra
Stable, concentrated, organic acid solution with a broad range of highly active fulvic acid molecules that improve nutrient uptake and fertilizer absorption. Increases chlorophyll synthesis and improves overall plant growth.

Nitamin®
A saturated polymer nitrogen solution with a low salt index, low ammonia and low biuret levels for improved crop safety.

Boron
Essential for germination of pollen grains and growth of pollen tubes on corn and for flower retention and seed formation on soybeans.

Phosphorus
Vital for seed formation and improves grain quality. Increases water use efficiency and photosynthesis respiration, and energy storage and transfer.

Sugar
An additional carbon source for energy that is immediately available to the plant. Also helps reduce burn from fertilizers.
