

(3-3-2) FOLIAR NUTRITION

About Hype®

Productive plants require balanced nutrition for ideal growth and development. **Hype** was created to provide all crops with a foliar supply of readily available nutrients, micronutrients, and carbohydrates that are necessary for optimal yields. Hype should be applied in conjunction with herbicide applications to ensure that micronutrients are available when they are needed. Incite™ Plant Growth Regulator is an excellent partner product with Hype to maximize yield potential.

Hype Formulation

KaPre® PhoNix

Contains organic compounds that help reduce the effects of environmental stress as well as optimize yield.

KaPre® Spectra

Stable, concentrated, organic acid solution with a broad range of highly active fulvic acid molecules that improve nutrient uptake and fertilizer absorption. Increases chlorophyll synthesis and improves overall plant growth.

Prudent® 44

Formulated with patented urea phosphite, a unique form of phosphorus that is quickly absorbed by plants. Prudent 44 is extremely mobile within the plant and will complement systemic acquired resistance and contribute to overall plant health.

NPK, Krystal Klear® Ca, Mg, B, Cu, Fe, Mn and Zn

Adequate, balanced nutrition is important for plant development and enhanced plant health. Micronutrients help build up the plants natural immune system to keep early season diseases at a minimum. Our micronutrients are chelated with IDS and EDTA for superior performance. This dual-chelation technology results in better uptake with much lower rates than competitive products.

Sugar

An additional carbon source for energy that is immediately available to the plant. Also helps reduce burn on plant tissues from fertilizers.

GUARANTEED ANALYSIS

Total Nitrogen (N)	3.0%
3.0% Urea Nitrogen	
Available Phosphate (P ₂ O ₅).....	3.0%

Derived from: urea, monopotassium phosphate, calcium EDTA, monoammonium phosphate, boric acid, copper IDS, iron EDTA, iron IDS, magnesium EDTA, magnesium IDS, manganese EDTA, manganese IDS, zinc EDTA and zinc IDS.

Benefits of Hype

- Correction of micronutrient deficiencies such as manganese - visual response within 48 hours after application on soybean.
- Reduction of “yellow flash” that can result from herbicide applications.
- Decreases burn potential of UAN when wheat is top-dressed at green-up.

Application Instructions

Hype may be applied to all types of crops including but not limited to: corn, soybeans and wheat as a foliar application at a rate of .5 to 1 gallon per acre. Applications may be made at emergence and every 10 to 14 days throughout the growing season, as needed. Use sufficient carrier to adequately cover crop foliage.

Caution: Plant and leaf injury may occur on some crops when certain weather and growing conditions are present.
