**General Information**

**Crop Charge** is a concentrated carbon and microbial energy source designed to stimulate soil biology and improve nutrient efficiency. It contains a blend of simple and complex sugars, 17 L-amino acids, and a biodegradable sequestering agent. The simple sugars provide an immediate food source for beneficial microbes, while the complex sugars act as a moisture-retaining, slow-release carbon source that mimics root exudates. The biodegradable sequestering agent helps keep nutrients in solution and in the root zone, supporting steady nutrient release.
